## How to measure your vehicles hood height for the Bonnet Box

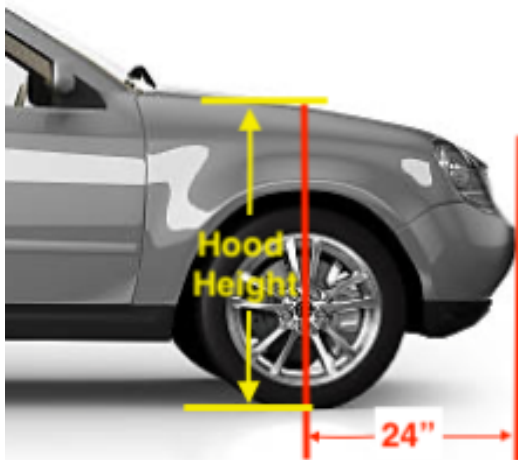

The primary feature of the Bonnet Box is the ability to run the nose of a vehicle under the box so that very little parking space is lost for the vehicle to park in. To ensure the proper size Bonnet Box is ordered for your stall, and to ensure it is installed correctly, it is important that the height of your car hood be measured accurately.

To measure the height of your vehicles front hood for this purpose please follow the below instructions.

From the front of your vehicle bumper measure back 24", this should be about the location of the center of the front wheel. (See picture 1)

At this point measure the height of your hood from the ground up. Please note the most vehicle hoods are not flat and tend to be higher at the center of the vehicle and lower towards the sides. Because of this it is important to ensure you are measuring to the highest point of the hood. To make this easier it may be best to get some help. (See picture 2)

Provide this number to your Bonnet Box sales rep so they can ensure the proper Bonnet Box is ordered and installed in your parking space.
